## DETAILED ACTION

### *Continued Examination Under 37 CFR 1.114*

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 4/12/04 has been entered.

### *Claim Rejections - 35 USC § 102*

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-4, 10, and 21 are rejected under 35 U.S.C. 102(b) as being anticipated by Arjomand, US Patent No. 5,884,202, cited by the applicant.

Arjomand discloses a modular wireless diagnostic test and information system comprising: a combined user interface and main control 12; a microprocessor (PC) for executing an operating system (windows base system) and a diagnostic application program; one internal non-volatile storage device, such as ROM, is inherently coupled to microprocessor and an external non-volatile memory (PCMCIA) card; the user interface configured for remote updating (through LAN connection) of at least one of a diagnostic application program and memory of the tool, wherein the said microprocessor, non-volatile storage device, and user interface are integrally connected to said diagnostic tool; the VROM software is stored in a memory (flash

memory) attached to the user interface, the user interface includes wireless port for receiving portable media (see figures 1, 2; col. 5, line 26 to col. 6, line 31).

***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

6. Claims 4-9, 11-20, and 22-25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Arjomand. The teachings of Arjomand have been discussed above.

Arjomand fails to disclose or fairly suggest all the specific method steps, such as displaying the upgrading procedure, and some other details of the claimed invention, such as having the remote terminal connected to the Internet. However, these specific details fall within the realm of engineering design choice for meeting customers' expectation and specification, failing to provide any unexpected results. Furthermore, these steps and details are well known in the art. It would have been obvious for an artisan at the time the invention was made to modify

the system of Arjomand to perform similar functions as the claimed invention. Regarding the specific method steps, since the structural limitations are as recited, the method steps is obtained. Therefore, it would have been an obvious extension as taught by Arjomand.

***Additional Remarks***

7. The prior art still meets the limitations of the claims.
